

Dairy Case Conveyor Chain

Renold Jeffrey Dairy Case Conveyor Chains have what it takes to optimize efficiency in today's high-production dairy plants — as well as bakeries, water bottling plants, and large distribution warehouses.

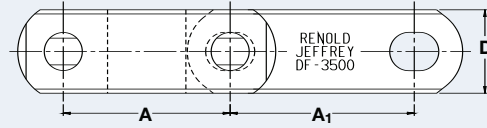

These heavy-duty, multi-flex, in-floor conveyor chains can make several turns in a single run, saving transfer points and floor space with a compact layout.

Renold Jeffrey Dairy Case Conveyor Chains are specifically designed to handle heavy case weights and variable shock loads. Specially selected, heat-treated alloy steels provide superior strength. Induction-hardened pins and sliding surfaces extend wear life. Cupped outer sidebars facilitate flexing and protect pins from wear. The result is strong, long-lasting, reliable operation.
